*The new alternative to Tiling*

Anti Bacterial

Virtually  
Maintenance Free

Lead Free

Insulating

Insect Repellent

Fire Rate Class M1

Water Proof

## **A simple & cost effective alternative to tiles**

**Decos wall panels sold in the UK are extremely versatile. Wall panelling can be fitted in any room - in the home or at work - and can be fitted to walls or ceilings.**

### **Bathroom Wall Cladding**

Unlike ceramic tiles, our bathroom panels are warm to the touch so condensation will not form on it, therefore mould growth is inhibited. Our wall panels are therefore very well suited to areas of the house with high humidity such as the bathroom, but they are equally effective in a shower room, kitchen, wet room or utility room. There is no grout so cleaning is simplicity itself, just a quick wipe over with soapy water. Bathroom cladding can be installed over tiles providing they are fixed securely. Its honeycomb structure lends a degree of heat and noise insulation to any surface to which it is attached.

### **Panel Showers**

You can panel a shower cubicle with our decorative wall cladding or even the whole shower room or wet room. If you have got an existing shower cubicle that needs to be brightened up the panels can be installed over your existing tiles - and running the panels down on to a shower tray will produce a better seal than running them behind the shower tray. The waterproof panels do not have to be limited to the shower cubicle alone, the whole room can be transformed - and the more you use, the greater the benefit: no grout to keep clean, rake out or maintain; nothing to paint or varnish; condensation problems reduced

### **Kitchen Cladding**

Waterproof wall panels can be used very effectively on kitchen walls and ceilings and will provide an extremely attractive easy to clean, grout free surface. Our kitchen cladding has a European M1 fire rating and will resist heat up to 60°C - the only thing to remember is that it is a UPVC cladding system and as with most plastic it is liable to melt or warp if exposed to direct heat such as kitchen hobs or central heating boilers. In these situations it is better to use ceramic tiles in these hot areas and use panelling in the rest of the room.

### **Bath Panels**

It is possible to make a bath panel from all of our panelling products.

If you are panelling your bathroom you will probably have enough off-cuts left over to make a bath panel. This will give your bath a "built-in" look and will also provide a very sturdy panel - much more rigid than a conventional acrylic bath panel that are supplied with many bathroom suites.

Sometimes a frame needs to be made to which the panels are attached, but this is not always necessary (depending on the type of bath). You can also make a corner bath panel, although this is a little more complicated - contact our sales office for details.

### **Hygienic Wall Cladding**

Our waterproof wall panels are suitable for use as a hygienic wall cladding system in food preparation areas as there is no grout to harbour germs or bacteria. Installation is quick and easy and with little or no preparation work required can prove very cost effective even in large areas.

### **Ceiling Panels**

Anyone who has painted a ceiling will appreciate the maintenance free qualities of our ceiling panels. All of the panels in our range can be used as ceiling cladding, but some work better than others on the ceiling. As a general rule light, matt or silk finishes work best but try to avoid using the same panels on the walls and ceiling - it can end up looking like a mausoleum! Gold and Silver Highlight Strips can also be used to help complement the panels.

As can be seen from many of the images included here the wall panels and ceiling panels can be used to transform any room in the house

**All of the waterproof wall panels that we sell have been selected for one reason alone - quality.**

" I was extremely happy with both the product and service from Decos Panels. I had to contact the sales department regarding delivery and the response was both quick and very helpful. Fitting the panels was just as easy as the literature claimed (including the bend into the corner ), and in my opinion looks better than regular tiling and is incredibly easy to clean and maintain. It was a slightly more expensive option to use panelling in our shower cubicle, but we are 100% certain we made the right choice, and would do exactly the same next time. Thanks Royce"

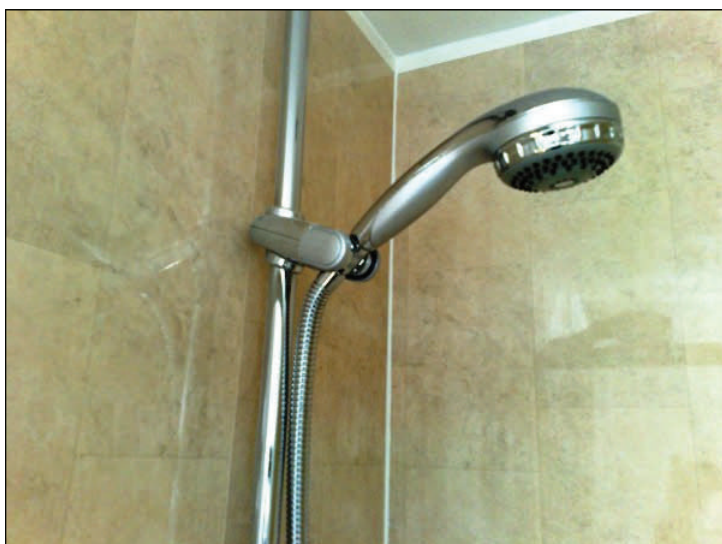

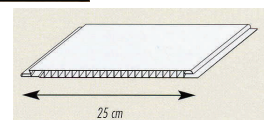

## Great on Ceilings

**BEFORE**

**AFTER**

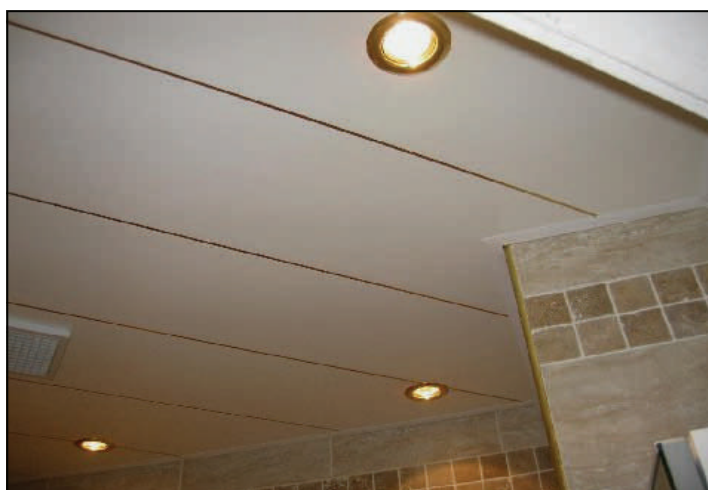

Florentine Sand

- can be installed over existing tiles
- **DIY, save money by not paying a tradesman**
- low maintenance
- no grout to turn mouldy
- wipe-clean surface
- warm to the touch
- helps reduce condensation
- over 50 colours to choose
- order online

*These panels are easy to install and with all the accessories available anyone can achieve a professional finish. I saved myself over a £100 by buying the Decos Panels. I am now thinking of doing my kitchen in the same product, only a different colour and will definitely be using the Decos PVCu Panels.*

Sumatra Blue

Labo Cream with Gold Strips

## Decorative PVC Panelling

Mosaic Glacier Grey

Orion Pompei

I would just like to say that the panels are excellent and saved me from hours of messy tiling. I have just finished cladding the walls to a room with a hydro-therapy pool in and would recommend this to anyone. I had not used them before and was pleased with the ease of installation and also the finish and quality of them. I now look forward to many years of easy maintenance.

Deliveries to UK Address Only !

Delivery is 2 working days, depending on day and time of order

If you need an overnight delivery or require delivery on a specific day please

Contact the sales office on 01264 359984 to discuss your requirements.
