

AB COMPOSITE DECKING chocolate

- 20 Year Guarantee
- Anti-Slip
- Eco friendly
- Easy to install

Battersea Exchange is located at the Western Gateway to the Nine Elms regeneration area, a new and vibrant cultural district on London's South Bank. This 42 acre, £15 Billion project is the most ambitious, transformative regeneration project that London has seen in decades, when complete it will be home to dozens of independent shops, restaurants and venues for its residents and the general public to enjoy.

With the AB Composite Decking Boards becoming ever more recognised as the "go-to" product for projects like the Battersea Exchange, we were the easy choice for Taylor Wimpey. The product chosen for all of the balconies, winter gardens and terraces was the AB Composite Decking in colour Chocolate.

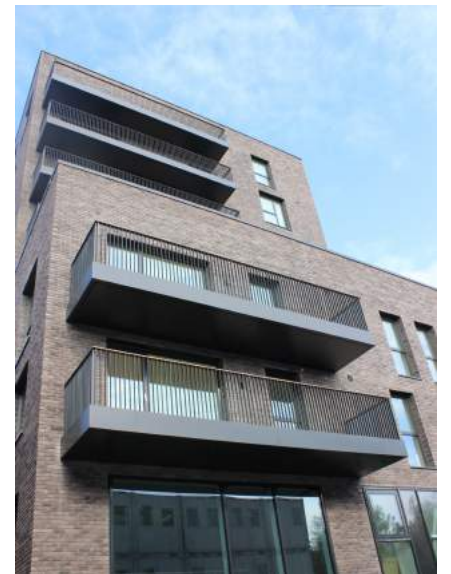

With a 20 year guarantee and anti-slip certification this was the perfect solution for the large roof terrace at St. Marys Catholic Primary School within the Battersea Exchange. Being a school the decking will be exposed to high volumes of traffic, being low maintenance was another factor that made the AB Composite Boards the ideal choice for the job.

We at AB Building Products Ltd. are extremely proud to be associated with such a prestigious project and wish all of the new residents at the exchange many years of enjoyment from their balconies, winter gardens and terraces where they can view this vibrant commercial and cultural centre of the capital.

"Having worked together with AB Building Products Ltd. on phase one I can honestly say how delighted we have been with all of the products and also the service received. We are looking forward in continuing our working relationship into the next phase. It is nice knowing at all times that they have sufficient stock levels, we call off orders and get the goods to site within 2 days."

Eamonn Buckley - Project Manager, Midgard Ltd.
