” Our personal collection has been created and inspired by holidays, beaches and in particular the wide spectrum of colours found in pebbles. Our tiles have been carefully chosen using research, customer opinion and sample trials, with all colours and collections being incredibly popular. Our range is carefully inspected regarding quality and packaging.

Unique Characteristics

RECTIFIED

Thanks to their **straight, rectified sides and angles**, the tiles can be installed quickly and tightly with small joints

ANTI-SLIP

The tiles have a **minimum anti-slip value of R11**, making them excellent for outdoor use. The anti-slip surface is also **very durable**

FROST RESISTANT

Our porcelain tiles are **impervious to moisture and temperature changes**. They are also fully frost-proof

PEDESTALS

Thanks to their nearly **perfect calibration**, our light and easily placeable porcelain tiles are perfectly suitable **to be installed on pedestals**

ASK US ABOUT INTERNAL

We can offer a 10mm internal tile to match the 20mm external on the majority of our Italian range. This would give the seamless look of a matching indoor tile and optional wall cladding.

Installation

General Installation Guidelines

Before installation of porcelain tiles, check if they (in dry condition) match the sample and carefully mix the tiles to achieve a harmonious appearance of colours and shades. Important: "Installation is acceptance": this means that after installation no complaints will be accepted except for hidden faults

Installation On A "Wet Bed"

We recommend installing porcelain tiles on a wet mortar bed of "4:1" grit sand to portland cement.
Evenly spreading our slurry primer over the underside of the porcelain paving to create a bond bridge between the wet bed and the paving.
Do not "butt joint" your porcelain paving. Use a minimum gap of 4mm to avoid chipping edges and use "tile spacers" to create uniform spacing.
A weather repellent grout is generally used.

Maintenance

Cleaning and Maintenance

Porcelain tiles are very easy to maintain. Any patio will look like new for years thanks to the use of the latest technology. Sweeping or regular cleaning with water and a non-aggressive detergent is sufficient as periodic maintenance.
If after installing and grouting any cement residue has left, it can be removed by using Lithofin KF Cement residue remover.
Do not use sealers and oily detergents. Due to the low porosity, they will remain on the tile surface as a greasy layer.

Ethically Sourced

We have a sole agreement with our factories, who we have carefully chosen to source our products due to their quality manufacturing process. The factory is visited between 5 and 6 times a year for product development and inspections if required. We feel that this is essential to sustain a professional relationship and sustainability.
